Operation Oryx, started more than 15 years ago at the Phoenix Zoo to save the rare white antelope—believed to have inspired the unicorn of mythology—has apparently succeeded. The operation was launched in 1962 when it became evident that the animals were facing extinction in their native habitat of the Arabian peninsula.

An original herd of nine, put together through *Operation Oryx* by five world organizations now number 47 in Phoenix with another 38 at the San Diego Wild Game Farm, and four others which have recently been sent to live in their natural habitat in Jordan.

Also, in what has come to be known as "The Second Law of Return," rare biblical animals are being collected from many countries to roam freely at the Hai Bar Biblical Wildlife Nature Reserve in the Negev, in Israel, the most recent addition being a breeding herd of eight Arabian Oryx. With the addition of these Oryx, their collection of rare biblical animals is complete.

INTRODUCTION

The *Bibliography of Agriculture* is a monthly index to the literature of agricultural and allied sciences. It is based upon indexing records found in AGRICOLA (AGRICultural On-Line Access), the computerized bibliographic data files distributed by the National Agricultural Library. These files are prepared by four sources: U. S. National Agricultural Library (NAL); Food and Nutrition Information Center (FNIC); American Agricultural Economics Documentation Center (AAEDC); and Agriculture Canada (AgCanada). The Oryx Press, in cooperation with Datagraphics Press, Inc., prepares and publishes the Bibliography under the control of its own computer indexing system.

CONTENT

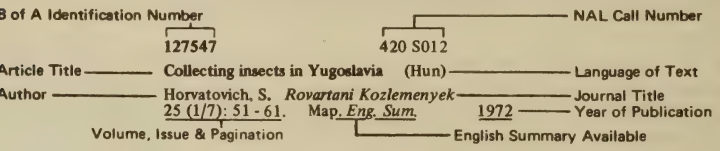
The National Agricultural Library collects literature related to agriculture from worldwide sources. The Bibliography includes citations of journal articles, pamphlets, government documents, special reports, proceedings, etc. Books, new serials and other materials recently cataloged by the Library are announced in the *National Agricultural Library Catalog* published by Rowman and Littlefield. Material covered by both the Bibliography and the Catalog is also available through computerized, on-line interactive systems offered by System Development Corporation, Lockheed Information Systems, and Bibliographic Retrieval Services.

Publications are considered for indexing by NAL if a summary, abstract or title is available in a language in which the indexers have expertise. Articles of substantial interest to the agricultural community are selected by specialists on the staff. Editorials, letters to the editor, regular columns, and articles signed with pseudonyms or initials are not generally included. Indexing on the processing of agricultural products is limited to those on primary processing. In general, material must have been published in the current year or the preceding year to be included by NAL, but exceptions are made for comprehensive volumes or works of special significance to a wide audience. Articles which would not otherwise be indexed in the *Bibliography of Agriculture* are included for USDA authored, sponsored, or published materials. FNIC and AAEDC place no limitation on date of publication for entry into the data base. Abstracts and subject terms provided by FNIC and AAEDC are not published, although they are available in AGRICOLA.

The Bibliography is divided into ten sections: A main entry section, five main entry subsections, a geographic index, a corporate author index, a personal author index, and a subject index. In addition, a List of Journal Title Abbreviations Cited in each issue is included in the front matter.

MAIN ENTRY SECTION

The main entry section provides descriptive bibliographic data for records added to the AGRICOLA files during the preceding month.



Entries are assigned to one or two of the broad subject categories shown in the table of contents. The array of subject categories was increased in 1973 to facilitate browsing through a small number of citations of high relevance to a particular interest. Approximately equal numbers of citations will fall into each category over a given period of time. In assigning materials to the categories, first consideration is given to the aspect, discipline or methodology involved, so that the categories will enhance information given in the title.

Within each category, entries are arranged alphabetically by journal title abbreviation. This permits rapid locating and scanning of articles from journals which are known to be relevant.

Most entries begin with a six-digit identification number; however, when two categories are assigned to an entry, only the primary category carries the ID number. This number, which is assigned sequentially throughout a volume year, serves as an identifier for the item in the various indexes. The call number of the National Agricultural Library is also noted on the first line of each entry, and should be included in any correspondence with the Library. Agricultural economics items not cataloged by NAL have an identification number in the call number position. All titles are in English, using the Library's translations of non-English titles as necessary. If the text is other than English, the original language is indicated in parentheses following the title, using the following notations.

(Afr)	Afrikaans	(Geo)	Georgian	(Pol)	Polish
(Alb)	Albanian	(Ger)	German	(Por)	Portuguese
(Arm)	Armenian	(Gre)	Greek	(Rum)	Rumanian

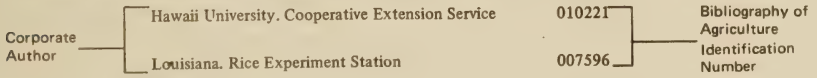
In order to identify bibliographic elements within each main entry, note the following:

MAIN ENTRY SUB-SECTIONS



Since The Oryx Press became publisher of the *Bibliography of Agriculture* (in January 1975), five main entry sub-sections have been added. These sections follow the Main Entry Section and appear in the following order: USDA Publications (authored by, sponsored by, and published by); State Agricultural Experiment Station Publications; State Agricultural Extension Service Publications; FAO Publications; and Translated Publications. Each of these five sections appeared in the original *Bibliography of Agriculture* published by the U. S. Department of Agriculture prior to 1970. The citation format used in these five sections differs from the Main Entry Section only in the elimination of the *Bibliography of Agriculture* Identification Number. These numbers have been dropped in these sections because all the entries are in the Main Entry Section as well as in the sub-sections.

GEOGRAPHIC INDEX

As part of our goal to constantly increase access to the literature, we have added a geographic index. This index is a direct alphabetic listing of all place names which have been indexed in association with the title. Obviously not all titles have geographic entries. Geographic descriptors are added whenever they are germane to the subject of the article.

CORPORATE AUTHOR INDEX

In addition to corporate authors, this index includes listings for other selected corporate bodies which publish extensively in the agricultural field. Included are USDA authored, published or sponsored publications, and publications of the State Agricultural Experiment Stations, Extension Services and the FAO. For all entries the full corporate citation is given, followed by the six-digit identification number referring to its appropriate main entry.

PERSONAL AUTHOR INDEX

All personal authors' names (to a maximum of ten for each citation) are included in the index. Entries are made by last name and initials, followed by the six-digit identification number referring to the bibliographic data in the main entry section.

SUBJECT INDEX

The vocabulary of the *Bibliography of Agriculture* is derived from the indexed literature. As a result, it reflects both natural language and scientific terminology. The reader must keep this fact in mind and approach the subject index without any preconceived taxonomy in mind. For example, data on a particular member of the ACARIDAE family may be found under TICKS as well. Prevention measures will be found under ACARICIDE.

The reader should plan to search in terms of the most specific natural-language term prior to searching under a scientific term. However, the reader should note that the vocabulary is an open-ended one and new terms are added each month. Undoubtedly, readers will be more

keenly aware of crucial search terms within their own fields of research. If such terms are missing, we hope readers will notify the editor of such gaps. The Subject Index will increase its utility if there is frequent interaction between the research community and the editor.

All entries are complete (none are truncated), and are based on single words in the title (and title enrichment when added by the Library). An entry will be made whenever a title word matches a word on the authority file, which currently contains over 38,000 terms. The file is organized so that in many cases synonymous terms are grouped together under a single subject heading. Thus, singular and plural forms are grouped under a single term as are grammatical variants.

The title word on which the entry is based appears in italics to facilitate rapid scanning of the index. A secondary word, which may either precede or follow the primary word, appears in boldface type. The alphabetic sequence is by the secondary (boldface) word. These word pairs help provide finer access to desired terms, particularly under headings which have many entries.

Many general terms have been deleted from the control vocabulary since 1975, and work has just been finished on a more complete list of specific terms. *Agricultural Terms,* the second edition of the *Thesaurus of Agricultural Terms,* reflects all the changes made in the control vocabulary through December 1977. This second edition is now available.

The last item of each entry in the Subject Index is the six-digit *Bibliography of Agriculture* Identification Number. Use this number to locate the complete main entry citation in the monthly issues.

About the author

Jane Buzby McFall is librarian at the Pennsylvania State University Life Sciences Library. As a result of her work in reference, instructional services and acquisitions in agricultural economics, rural sociology, agricultural education, agricultural engineering and food sciences technology, she became aware of the immense value that an immediate-reference index to individual commodities would have.

Commodity data researchers will find the result of her impressive effort — the AGRICULTURAL COMMODITIES INDEX — an invaluable, time-saving tool in their research efforts.
